

Which Type of Car Phone Holder Is Good

Smartphones are indispensable communication tools for many people nowadays, while cars are essential means of transportation for outings. Therefore, the development of both has been very rapid. Many drivers use smartphones for navigation, requiring a car phone holder to secure the phone. Common types of car phone holders include vent mount phone holders, plastic W-shaped phone holders, adhesive phone holders, and magnetic phone holders. Each type of holder has its own advantages, disadvantages, and installation methods. Let's take a detailed look at them below.

Which type of car phone holder is good?

1. Vent Mount Phone Holder: This type of phone holder is not recommended for several reasons. Firstly, it is mounted on the air vent, which lowers visibility and makes it inconvenient for the driver to observe while navigating. Additionally, it blocks one of the air vent openings, affecting the distribution of hot and cold air. Moreover, the vent blades are not fixed, so installing a phone holder may cause instability and produce noise, making it unsuitable for use.

2. Plastic W-shaped Phone Holder: When purchasing a phone holder, it is advisable to choose the W-shaped design. Most Android phones still have a physical home button, and using a fully enclosed phone holder can make it inconvenient for the driver to access the

button. The W-shaped phone holder solves this problem effectively. Plastic phone holders are lightweight, reducing the likelihood of noise due to gravity, and they are also more affordable.

3. Adhesive Phone Holder: This type of phone holder uses a nano adhesive technology to attach a transparent phone case to the car. The phone can be easily clipped into the case when getting into the car and removed when getting out, without causing damage to the phone or affecting its buttons. Additionally, it does not harm the car's interior. The adhesive used is not ordinary glue; it is self-adhesive and can be removed with water, allowing for repeated use.

4. Magnetic Phone Holder: This type of phone holder is not only aesthetically pleasing and space-saving but also provides stability due to its texture. However, some car owners find it unsightly to attach metal plates to their phones, affecting the phone's appearance. Nevertheless, internal embedded metal plates are available, which do not affect the appearance of the phone and still allow for convenient use of the phone holder. With a magnetic phone holder, the phone can be easily attached to the holder at any time without worrying about obstructing the buttons. It is compact and convenient, making it an ideal choice for car owners.

How to Install a Car Phone Holder?

Installation of Vent Mount Phone Holder:

1. Prepare the holder and the vent mount base.
2. Unscrew the knob on the back of the holder and insert the vent mount base, then tighten the knob.
3. Choose a suitable air vent and press the spring clip on the vent mount base to secure it in place.
4. It's that simple. If driving for extended periods, you may need to install a stable bracket.

Installation of Magnetic Phone Holder:

1. Firstly, locate a suitable position in the front row of the vehicle for installing the holder. This position should be convenient for the driver to view and access the phone, without obstructing other functions of the vehicle.
2. Once you have found a suitable position, wipe the area with the "wipe" tissue included in the kit.
3. After wiping, use the "dry" tissue included in the kit to wipe the area again, removing any excess moisture.
4. Next, peel off the adhesive film from the bottom of the ball base and stick it to the cleaned area.
5. After sticking it on, press firmly with your hand for about 15 seconds to ensure the adhesive bonds securely with the vehicle.
6. Once installed, attach the circular disk to the ball base, then stick the metal plate to the

back of your phone.

7. When using, simply bring the metal plate on the back of the phone close to the circular disk on the ball base to magnetically attach it, ensuring it stays in place.
